Right) Image of perinatal mouse spinal cord labeled with NeuroView ® dyes. Dr. Heather Jensen-Smith, Creighton University. Left) Brain cross-section showing the cerebellum. Sarah Hake, undergraduate student, Creighton University.
How to generate a tiled image of a large area.

1. Select **Stage** in the LSM 510 main menu.
2. At the bottom of the Stage window **select the number of individual images in the x and y direction** you would like to include in the tiled image.

3. Select **Start** in the Stage window. If using a slow scan speed and/or multiple tracts it may take a few sections for the 1st image to appear in the tile window.
