With more than 40 years of contributions to the field of osteoporosis, we need your help to sustain its future.

An endowment fund has been created to support the center’s work. Through these legacy gifts funds can “live on” at the University and provide a consistent, ongoing means of support for vital activities. It’s an investment in Creighton University and the quality work of the ORC.
Sister Anne Evers
Endowed Osteoporosis Research Fund

An endowment allows us to:

- Sustain ongoing patient care and vital treatment for those suffering from osteoporosis.
- Continue laboratory and clinical research, efforts that have already identified new approaches and treatments for the disease.
- Help us train new leaders for health care and research advances needed for the future.
- Assure availability of data, specimens and research to the entire health care community so all can benefit.
- Preserve thousands of bone samples, stored DNA and data records as vital links to ongoing discovery and advances.
- Attract and retain the most qualified, compassionate faculty and staff who dedicate their skills to patient care, research and teaching.
- Offer an educational, hands on learning environment designed to prepare our students and doctors to be investigators and researchers for future discoveries.
- Provide resources for exploratory research that serves as the foundation for generating additional funds.
- Help young investigators and researchers become established.

Creighton calls upon you to become a partner in fulfilling our leadership role as a preeminent institution of higher learning, patient care, research and service to the world. By endowing The Osteoporosis Research Center you can help Creighton be a university WILLING TO LEAD in every way possible.

Your gift can mean so much. We invite you to visit the center or find out more about us at www.creighton.edu.
