

There are three files you will need to download in order to run New Innovations. They need to be downloaded and run in the order they are listed here. They will need to be downloaded and installed on your handheld device. Click here to access those three files. There are two ways you can do this.

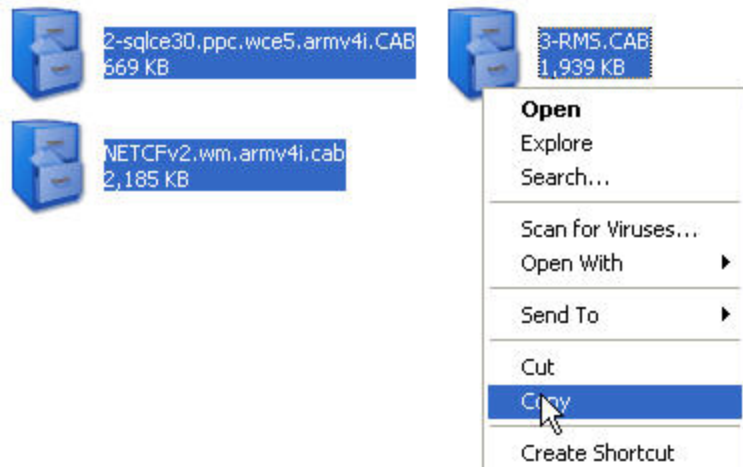

Downloading to your handheld via your computer:

1. You may do it from your desktop computer, while your handheld is in the cradle that is connected to your computer. To do this;

Download the three files to a folder on your computer. We named ours “pda”.

Once all three files are downloaded, navigate to that folder and copy the contents of the folder. (You can do this easily by selecting each file while you hold down the Ctrl + Click, then while hovering over one of the files, do a right click and select “copy”.)

Now click on the Start button, then on My Computer...scroll down until you see this icon. Double click on it to open it. Then paste (Ctrl + V, or right click and select Paste.) the files into the mobile device. Next you will need to browse to these on your handheld and run them in order to install them. To do this, tap on the Start button, then go down to Programs. Now find File Explorer.

Other

Up at the top, you may need to select Show, My Documents. Then scroll down to find the three files.

They will look something like this, though the first one may not have a 1 in front of the title and instead of .pp, it will say .wm. Tap on each of these in order to install them. THEY MUST BE INSTALLED IN THIS ORDER, the NETCFv2 first, then the 2-sqlce and finally the 3-RMS.

	1-NETCFv2.pp...	10/25/05	4.93M
	2-sqlce30.ppc...	10/25/05	1.46M
	3-RMS	10/25/05	657K

Tap the X in the upper right hand corner, then return to the Program screen by clicking on the Start button and selecting Programs. You will find the New Innovations icon. Tap on that and the program will open up.

Once you have logged in, in the bottom right corner is an option to synchronize. You will need to do this by tapping on that option. Then you will be able to access the program. (This is a different synchronizing than the Active Synch that your handheld does with your computer. This is a synch with just this program.)

Downloading directly to your handheld:

2. You may also download them directly on your handheld by opening a browser on your handheld and navigating to this site. Then click here to access the files. Tap on each link IN THIS ORDER:
 - a. NETCFv2.wm.armv4i.cab
 - b. 2-sqlce30.ppc.wce5.armv4i.CAB
 - c. 3-RMS.CAB

When doing this, make sure the “Open file after download” option is selected. You will need to wait after tapping each one for the file to download. They install at that time as well.

Once all three have been downloaded and installed, click on the Start button, go to Programs and look for the New Innovations Icon. You will need to log in when the program opens, then you will also need to use the button on the lower right hand side to Synchronize the program. This is different than the Active Synch between the handheld and the computer.
